

Pogo Gakko First Meeting Notes

- Community driven pokemon go website
 - o Currently there are many different chat groups spread among different chat services
- The Barrhaven group will be our starter test group

Raid organization

- Currently this is just done via whatsapp or other chat services
- Want ability to create raid trains
- Big caveat: making it a phone app (or usable primarily on a phone)
 - o Mainly want ability to receive push notifications
 - o Want to integrate mapping/directions functionality
- Want ability to make raids public or private

Trade Section

- List all current pokemon a user has, which are available to trade, which are requested for trade
- Need pokedex database
- Need user profiles (possibly with pokemon inventory listed for that user?)
- Possible to tie this in with discord?
- Offer multiple trades (ie. Multiple amount of Pokemon **A** for one type of Pokemon **B**, 2 for 1, etc.)
- Reporting system to alert moderators
- Ability to block/blacklist users

User profiles

- Possibly sign in using google or discord
 - o Client preference would be discord
- Users should be able to display achievements/medals (ie miles travelled)
- Will likely need to manually enter this information – and so will rely on the honour system.
- Track community milestones
- Allow permalinks to profiles
- Profile customization a-la LinkedIn or steam
 - o Display a user-customized selection of achievements, pokemon, etc.

Leaderboards

- Will require a database
- A spreadsheet of this data already exists according to client
- Should be able to filter by region

PVP

- Facilitate battles
- Organize player availabilities for battle
- Would be good to utilize push notifications here
- Some tools for this already exist according to client -> <https://thesilphroad.com/map#2/40.29/-76.66> ?
- Matchmaking functionality (match with players of a similar level, similar region, etc.)

Other requests

- Client wants a tool to tell you what CP values need to be for you to level a pokemon while keeping it in the appropriate league
- Client wants a tool to help formulate the best team (based on combined stats) for certain leagues
- Site we create must be responsive; mobile-first
- Progressive web app suggested by Pat G.
- Client prefers both groups to build on the same platform/environment
- We need to suggest a platform for hosting
